Company Profile

Quanta Microsystems, Inc. (QMI) is a wholly-owned subsidiary of Quanta Computer. Founded in 2006 by visionary entrepreneurs, QMI provides ODM and JDM services for the fast-growing home network equipment and wireless connectivity markets. Aiming to enrich digital lifestyle, QMI is focused on enabling wireless connectivity throughout the home as well as reliably distributing digital contents wirelessly in a premise. All QMI products are manufactured, with the world-class manufacture facilities, by the parent company Quanta Computer (QCI). QMI also utilizes QCI's global supply chain system for customer support.

Committed to providing the world's finest RF modules; QMI recruited talents with decades of RF and microwave product development experience. With Design for Manufacturing (DFM) in mind, QMI RF engineers are trained for handling the delicacy of making small size modules. To ensure the best performance of the RF products, QMI RF engineering team devotes their energy to optimizing antenna design. In addition to the RF hardware team, there is an experienced software team providing drivers and software support for mainstream OS systems. QMI is currently developing RF products with IEEE 802.11 a/b/g/n (WiFi), 802.15.3a (Zigbee), 802.15.4 (UWB) and 802.16 d/e (WiMax) standards.

QMI product portfolio also includes system products with value added software features. The versatile middleware created by QMI software team can be easily adopted for various networked home entertainment devices. The middleware is compliant with DLNA and ViV standards.

QMI's products are fabricated at QCI's ISO9001 & ISO14000 certificated factories. The production lines utilize 100% AOI inspection, assisted with 3D printing inspection, to guarantee the lowest defect rate. Quality assurance procedures are implemented throughout the product development and production cycles.

QMI has customer service centers, operated by QCI, in Aachen, Germany, California USA and Tennessee USA. Overall customer satisfaction is the ultimate goal of QMI.
