**Company Profile**

Founded in 1989 and set up in Taiwan, ZyXEL is now the leading provider of complete broadband access solutions for service providers, as well as business and home users.

ZyXEL solutions boast the latest, hottest networking features such as Triple Play, Quality of Service (QoS), Network Security and Network Management. Both corporate and home users can take advantage of ZyXEL products and services to enjoy high quality, versatile media applications in a secure and manageable networking environment.

As one of the early modem makers, ZyXEL has undergone many transformations in the fast-paced networking industry; and its mainstay products have also evolved from modems, IDSN TAs and routers to broadband access devices serving the needs of the individual, small business and corporate users, and even large-scale central offices. Today, ZyXEL is one of the few companies in the world capable of offering complete networking solutions ranging from DSL customer premise equipment, central office equipment, Internet security appliances, switches, WLAN equipment, network-attached storage and centralized network management systems.

Thanks to the combined force of 29 sales offices and 3 R&D centers worldwide, ZyXEL successfully passed US\$480 million in annual revenue in 2007. The company currently has 3,216 employees, and distributors in 70 countries reaching over 150 regional markets.
