Company Profile

Company Overview

Founded in 1986, D-Link is a global leader in the design, manufacture and marketing of advanced networking, broadband, digital, voice and data communications solutions. Following our company motto, "Building Networks for People," D-Link continually meets the global networking and connectivity needs of digital home consumers, small office professionals, small- to medium-sized businesses, and enterprise environments.

From the beginning, D-Link engineers have researched, designed and manufactured innovative, standards-based networking solutions. We sell our state-of-the-art hardware at the best prices. Price may be the deciding factor for many new customers, but D-Link innovation, reliability and service keeps them loyal year after year.

A major contributor to our success is our established and expanding network of global distribution and delivery channels that brings products to more than 100 countries every day. We do more than meet the growing demand for computer networking and communications solutions - we fuel it. Our development of global distribution channels in more than 100 countries has resulted in double-digit growth every year for 20 years. D-Link surpassed the \$1 billion revenue milestone in 2007, driven by record sales in every geographic region of the world.

Global Presence & Service

D-Link is among the select companies that are able to meet the needs of even the largest

multi-national corporations. Since spinning-off its manufacturing operation in 2003, D-Link has focused on globally marketing its brand-name products. Today, D-Link has more than 2,100 employees with deep expertise in technical operations, customer support and engineering, located in 130 sales offices in more than 64 countries globally. With its global presence, D-Link serves in all major geographical regions, including the United Kingdom, Germany, the Middle East, India, Australia, China and a wide range of emerging markets including Russia.

Through dedication and commitment to our worldwide channel partners, we have fortified our branding, technology and marketing know-how; as well as our effectiveness in managing global logistics, worldwide business channels and customer services.

Environmental Policy

D-Link recognizes its role as a global leader and accepts the responsibility in providing high performance products that produce less harm to the environment. Over the years, D-Link has taken great strides in committing to the environment as the company led the market with the emergence of our Green Ethernet product line, saving up to 40% on energy. D-Link products fully comply with the RoHS Directive, WEEE, and European standards that prohibit the use of hazardous materials and promote recycling electronic products, respectively. In addition, the company has received a full 5-star TÜV Rheinland Star certification, the highest German recognition for excellence in corporate social responsibility.
